Add together for overall TOTAL SCORE	
---	--

0 - 30 Low Stress

Your stress is probably at a manageable level right now. You are effectively coping with stress and are probably comfortable with your circumstances over the past two weeks. Relaxation has a protective effect against stress symptoms, and right now is an ideal time to start using relaxation techniques regularly.

31 - 50 Mild Stress

You may be starting to experience symptoms of stress. It is important to manage the stress now while it is still at a manageable level overall. Relaxation techniques can help to decrease stress symptoms, improve overall health, and protect you against future stress.

51 - 70 Moderate Stress

You are experiencing a moderate level of stress. Your symptoms are probably interfering with your quality of life, and you are most likely facing a number of stressful situations. It is essential to manage your stress level before it gets even higher. Relaxation techniques can provide relief from stress symptoms and counteract the harmful effects of stress.

61 - 80 Severe Stress

Your stress level is severe right now, and must be managed immediately to avoid stress induced health problems. You are probably experiencing a high number of stressful situations and many stress symptoms. It is advisable to seek support, such as speaking with a mental health professional. Relaxation can help eliminate or reduce stress symptoms and prevent stress-related health problems.

81 - 100 Extreme Stress

Your stress level is extremely high, and suggests extreme stress overload. You are probably experiencing stress induced health problems. It is important to seek support, such as speaking with a mental health professional. Relaxation is very important to help to alleviate the health problems caused by stress.

101 - 268 Dangerously High Stress

Your stress level is dangerously high. You are experiencing stress overload and your health and quality of life are suffering. It is essential to seek support, such as speaking with a mental health professional. Relaxation is vital to provide stress relief and improve your health.

This Stress Assessment does not replace medical advice and is to be used only to provide ideas about how to use relaxation to manage stress. Low scores on this test do not necessarily indicate a lack of stress. Symptoms may not necessarily be stress related and should always be checked out by a physician to rule out other causes before assuming that symptoms are caused by stress. Please speak with a health professional if you have any concerns about your health. See www.innerhealthstudio.com/disclaimer.
